

Shurley's Face Mud Mask

Our mode of action is different to a lot of other clays on the market. It is the only ancient volcanic mineral clay base with all-in-one selective adsorption of impurities, using ionic energy that can naturally help clean refresh skin and stimulate blood circulation to areas that need them most.

Shurley's All Natural Face Mud Mask is designed to draw out toxins and stimulate circulation using an ancient volcanic collagen mineral™ formula which cools, soothes and stimulates the skin to promote natural rejuvenation. It naturally purifies, cleanses and rejuvenates the face, adsorbs toxins and removes them to leave skin brighter, softer and smoother.

For tips and tricks on the various uses of Shurley's products, visit our [Frequently Asked Questions](#) page.

What makes Shurley's Face Mud Mask different to other cosmetic clays or muds?

- The primary ingredients are 3-Dimensional in structure & designed to breathe, plus our secondary ingredients contain concentrated minor clays with similar benefits to other clay cosmetics, including ingredients such as kaolin, bentonite, smectite, halloysite & montmorillonite.
- We use the oldest, purest, preservative free mud in the world – circa 350+ million years old with bio-available minerals to support collagen generation with our patented manufacturing process.
- Activated ionic energy gives instant cooling and quickly calms any hot affected areas. The natural kinetic energy is increased simply by stirring with 1 or 2 drops of water – nature's energy conductor.
- Cleanses using a lymphatic drainage type of action (supports natural sweat of impurities and release of micro-swelling through the skin into the mud) and quickly adsorbs impurities into the mud.
- Stays damp on affected areas to often confirm what your body is telling you. You can feel the heat exchange by running your hand above the mud or taking a picture of the drying patterns. Your second application will dry more evenly to show you that the treatment is working.
- Absolutely no oils, synthetics, sulphates, glycerins, glycols, methyls, linalool or any other type of alcohol. No mystery preservative chemicals, animal proteins, broken down animal bones or cartilage aka hydrolyzed collagen. Only all-natural minerals bio-available to support the generation of collagen.
